Ethics & Globalization

Analysis
Insights
Approaches

Winter Semester 2016/2017

About the Lecture Series

In our interdisciplinary lecture series 'Ethics & Globalization' the probing questions of globalization shall be examined in analytic depth and evaluated ethically. Therefore, the Working Group 'Plural Economics' invited a series of well-known speakers. The speakers will give interesting insights about various sections of globalization and speak about a number of important aspects within the big range of this topic.

Globalization derives from the growing interlinking of economical phenomena. Trade, education, and media are globally connected and supranational institutions are gaining more and more importance. But also apart from economics the term globalization is widely-used and nobody seems to scrutinize its meaning. For this reason we aim to examine globalization historically and to narrow it down to its real essence.

Within the lecture series we will examine topics like global financial markets, development economics, and global justice. But also issues like global climate change and migration will be addressed and critically investigated.

Earning Credits

Bachelor and Master students can follow the lecture series as a course and earn credits. Details will be circulated at the Introductory Session.

■ **Wednesday 19 Oct | 18 - 20 h | H33 AI**

Ethics & Globalization: An Introduction

Frank Steffen, University of Bayreuth

■ **Wednesday 02 Nov | 18 - 20 h | H33 AI**

Why is Finance Bloated and Dysfunctional?
